

First Honey® Sterile Ointment 28.4g / First Honey® Sterile Ointment 14.2g

A naturally potent skin healing ointment with 100% active Manuka honey, this easy-to-apply active honey promotes faster, better healing and provides long-lasting infection protection while working to immediately reduce pain and minimise scarring.

The 100% medical-grade 12+ Manuka honey creates a moist, low-pH environment, which supports new tissue formation and assists wound healing. Easy-to-use, non-toxic, natural and 100% safe, First Honey® sterile ointment helps reduce heat, itchiness, and pain and provides long-lasting infection protection.

Details:

100% Medical Grade 12+ Manuka honey. Our Sterile Honey Ointment contains Methylglyoxal giving it potent properties to mend and nourish skin. It is perfect treatment for minor abrasions, lacerations, minor cuts, scalds and burns.

This easy-to-apply Manuka honey ointment promotes faster, better healing and provides long-lasting protection from infection. Manuka honey has been clinically proven to kill bacteria and assist wound healing.

The 12+ rating assures the purity and efficacy of our First Honey products. Every batch of Manuka honey is tested to ensure it meets the strict criteria for Medical Grade usage.

The future of First Aid is natural and effective care for you and your family. Medical grade Manuka honey is widely used by healthcare professionals to treat and manage wounds.

First Honey products not only promote faster and better healing but also prevent infection without the use of artificial antibiotics. The perfect addition to your medical kit!

First Honey introduces a new range of revolutionary First Aid products enriched with the natural bioactive properties of medical-grade Manuka honey

How Does It Work?

Medical-grade Manuka honey has become widely used by healthcare professionals to treat and manage wounds. Found only in New Zealand, Manuka honey contains the presence of Methylglyoxal (MGO) a potent healing compound that does not naturally occur in any other honeys.

Why Should I Use It?

Promote faster, better healing and prevent infection, without the use of artificial antibiotics.

What Makes First Honey Different?

The efficacy of the Manuka honey used in First Honey products is unparalleled due to its high standard for handling, placement of beehives, and manufacturing process. First Honey has a fully integrated ISO-accredited system to manage the honey from beehive to final product, ensuring that only the purest, highest-quality medical-grade Manuka honey is present in every bandage and tube.

Stop The Overuse Of Antibiotics

According to the FDA, CDC, and World Health Organization, antibiotic resistance, which can result from the overuse of antibiotics, is the biggest problem facing medicine today. Many of the common, over-the-counter wound care ointments contain three antibiotics, yielding an exposure that's equivalent to a prescription antibiotic pill given by a medical professional.

INGREDIENT:

100% Pure Medical-Grade Manuka Honey
